

SMARTAPPS

Inspection Checklist

The Inspection Checklist mobile app was designed with the safety and efficiency of your fleet drivers and vehicles in mind. Inspection Checklist allows your drivers to complete necessary vehicle inspections on-the-go without worrying about paper forms. With the app, drivers can submit checklists, view past checklists, and enter meter readings all from their preferred mobile device. Inspection Checklist is compliant with all governmental regulations, including the DVSA Earned Recognition scheme. All data from the app integrates seamlessly with AssetWorks FleetFocus.

How it works: To begin a new inspection, the user must select the type of inspection they plan to conduct. They must input meter readings before beginning the checklist. After completing the inspection, they must sign their name before saving, reviewing, and submitting the checklist

About SmartApps: Today, it is more important than ever for drivers and operators to be able to complete tasks on-the-go, including performing inspections, updating meter readings, entering service requests, and more. The SmartApps suite offers convenience, ease-of-use, and integration of each mobile application with the FleetFocus system. Each application was designed to allow your staff and customers to go about their daily tasks with the convenience of mobile technology and the power of FleetFocus. The SmartApps are included in the AssetWorks MobileFocus Enterprise suite.
