WHAT A FULLY INTEGRATED FLEET SYSTEM LOOKS LIKE

Picture a single, connected system where every part of your fleet operation talks to each other. No more jumping between tabs, spreadsheets, or guessing games. Just one smart platform driving your entire operation forward.

Mobile Access

From shop floors to highways, your team stays connected. Techs update work orders on tablets. Drivers get alerts and log updates on their phones. Everything updates in real-time.

Maintenance Management

Visualise a digital dashboard that tracks every oil change, brake check, and inspection, automatically scheduling service before problems arise and keeping downtime to a minimum.

Compliance & Reporting

Compliance practically runs itself.
Reports generate automatically,
inspections are logged digitally, and
you're always audit-ready, without
scrambling at the last minute.

ATTHECENTER

Your Fleet Management Platform

Think of this as mission control. It's where all your data lives: work orders, vehicle records, maintenance schedules, compliance checklists, and performance reports. Everything flows through here, keeping your operation in sync and running like a well-oiled machine.

Fuel Management

Fuel usage data rolls in from across your fleet. You see patterns, spot outliers, and get instant insights into where fuel is being wasted—and how to fix it.

Telematics

Your vehicles become moving data sources. Real-time maps show routes, speeds, even driver behavior. Dashcams powered by AI help you spot risky habits and protect your team.

Parts & Inventory

Imagine shelves stocked with only what you need, when you need it.
Inventory is tracked in real-time, and reordering is smart, based on priority and usage, not guesswork.

Motor Pool Management

Employees reserve vehicles online 24/7, with the system handling availability, dispatching, notifications, and billing behind the scenes. No paperwork, no confusion.

Visit assetworks.co.uk to learn what solution best works for your fleet.
